SUMMARY

Senior Software Engineer with 6.5 years at Contentstack, progressing from Application Engineer to Senior Software Engineer I while owning developer platform products end-to-end. Shipped MCP Profile Hub, a production MCP server spanning **10 hosted catalogs, 180+ tools, and 28 system profiles** used by AI clients including Claude, Cursor, and Codex. Track record of measurable platform impact: **40% fewer validation errors, 25% faster extension loads, 40% lower manual maintenance, and 30% faster content sourcing**. Full-stack strength in React, Next.js, TypeScript, Node.js, NestJS, REST APIs, and AI/MCP infrastructure.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Next.js(App Router), Redux, HTML5, CSS3, Design System, Accessibility, Micro-frontend architectures, Module Federation

Backend & APIs: Node.js, NestJS, REST APIs, JSON-RPC 2.0, MongoDB, Redis, Kafka, OAuth 2.0, Docker

Gen AI & MCP: Model Context Protocol (MCP) servers and tool catalogs, agent tooling, Claude Code, Agent Skills, Codex

Testing & Delivery: Vitest, Playwright, React Testing Library, Git, GitHub Actions, CI/CD, Agile/Scrum, Code Review, Performance Optimization

EXPERIENCE

Contentstack

Jan 2020 – Aug 2026

Senior Software Engineer I

Feb 2024 – Aug 2026

Hybrid

- Replaced hand-written Management API scripts with a governed, self-serve tool platform by architecting and shipping **MCP Profile Hub** using **Next.js and TypeScript**, Contentstack's MCP server for AI clients including Claude, Cursor, and Codex — scaling to **10 hosted catalogs, 180+ tools, and 28 prebuilt system profiles**.
- Turned customer automations into first-class, auditable workflows by extending MCP Profile Hub so a customer's own **Automate automations and Agent OS agents become callable tools**, enabling deterministic, auditable agent workflows.
- Secured the platform for production use with **OAuth 2.0 PKCE, encrypted-at-rest tokens, rate limiting, and server-side plan entitlements**, plus JSON-based profile import/export — validated by **66 test suites**.
- Extended platform reach to app developers by delivering **Phase 2 of Contentstack's App MCP Server**: Hub-aligned manifest generation, stack vs. organization location parity, and a multi-region Developer Hub API client with Vitest-backed validation.
- Cut validation errors by **40%** through schema-aware validation for App Extensions across nested field types, and improved extension load time by **25%** via event-driven metadata batching that eliminated redundant requests.
- Reduced manual maintenance by **40%** by automating system-app version rollout with **NestJS, Kafka, and CloudEvents**, and cut regressions by **15%** by extending Playwright E2E coverage with Slack alerting.
- Built and maintained **Product Wiki** as a centralized knowledge layer for developer tools, apps, and platform capabilities, **providing AI agents with structured product context** for knowledge retrieval and contextual understanding across development workflows.

- Improved content-sourcing performance by **30%** for teams building static sites on Contentstack by building and maintaining the **Node.js + Babel source plugin for GatsbyJS**.
- Eliminated one-way, irreversible app updates by shipping **React, Redux, and React Query** app version-control workflows, giving developers rollback, restore, and version-based manifest previews.
- Improved SDK adoption and platform compliance by extending the **App SDK with full TypeScript support** and resolving Snyk-flagged vulnerabilities.
- Implemented **internationalization (i18n) and localization** in a React starter application using **react-i18next**, enabling Contentstack localized entries to be consumed and rendered across supported locales.
- Built React-based starter applications, workflow boards, and **stack's data monitoring applications** by **consuming Contentstack REST APIs**, integrating API-driven data into typed, component-driven front-end interfaces.
- Used **GitHub** for collaborative version control and development workflows, contributing to peer code quality through **pull request reviews, mentoring, and actionable code review suggestions**.

Application Engineer
On-site

Jan 2020 – Feb 2022

- Achieved **40% faster load times** and a **92+ Lighthouse score** by migrating the marketing website from **Express/Nunjucks to React**.
- Connected Contentstack APIs with **15+ tools** (Slack, Jira, Google Sheets) and marketplace apps (OCR, JSON Editor, commercetools) by building **Zapier integrations** in JavaScript.

OPEN SOURCE PROJECTS

- **architect-agent** — Multi-agent documentation toolkit built on **Mastra.ai** that interviews you as a Senior PM or Principal Engineer and generates PRDs, TDRs, user stories, and Jira-ready CSVs; includes SQLite conversation memory, CI/CD mode, and multi-provider LLM support. *TypeScript, Node.js, LLM tooling*
- **Crowdly** — Live event discovery and booking platform on Contentstack's composable DXP with Lytics CDP segmentation (14 segments) and Automate booking workflows. *React 19, TypeScript, Zod, Vite* · crowdly.contentstackapps.com
- More at github.com/abhishek305 — including LaTeX Live Editor (TeX engine, client-side compilation) and DotPath (nested object-path debugging utility).

EDUCATION & CERTIFICATIONS

Bachelor of Engineering, Information Technology — Theem College of Engineering, Mumbai, 2019

AWS Certified Cloud Practitioner · Certified in AI-assisted workflows (MCP, Claude Code) · Above & Beyond Award, Contentstack (Q1 2023, Q3 2025)
